

TDS: CLEAR SEAL

PRODUCT NAME

CLEAR SEAL

DATE CREATED

01/01/2021

LAST REVIEWED 11/02/2021

DESCRIPTION

This unique single pack is specially formulated and a breakthrough in liquid clear sealers. **CLEAR SEAL** is non-yellowing, easy to use, low odour, non-volatile, and environmentally friendly.

Historically only solvent based clear sealers have offered acceptable performance properties over acrylic sealers. Solvent sealers easily ignite, are hazardous and require extraordinary attention to proper ventilation and user safety.

Additionally, solvent sealers are not user / environment friendly, emit solvent vapours for many months, use toxic reducers and are generally only considered useful for masonry substrates.

QUICKWALL has developed water reducible **CLEAR SEAL** that imparts high water resistance, is hard wearing, high impact ability, algae and fungi resistance.

SPECIAL FEATURES

- **CLEAR SEAL** is very close to the performance properties of most solvent sealers, is environment and user friendly, and safe for the beneficiary.
- **CLEAR SEAL** can be used over a variety of materials, resists UV, has excellent adhesion properties, and enhances pigment binding.
- **CLEAR SEAL** is compatible with any other Quickwall Finish.

SPECIFICATION

Apply Quickwall **CLEAR SEAL** in accordance to the manufacturer's instructions for specific substrates.

Generally roller or pressurised vessel spray can apply **CLEAR SEAL**.

CLEAR SEAL can be reduced and cleaned up with water.
